SCIENTIFIC RESEARCH EXPERIENCE

Purdue University,   **Sep 2020 – now**
Supervisor: Prof. Pan Li
High-order pattern in the temporal network

- Define the interaction expansion of three nodes(a triplet) in a temporal hypergraph
- Try to find what type of, when, and why the interaction happens among a triplet.

Northeastern University, Synergetic Media Learning Lab,   **Oct 2018 – Aug 2020**
Supervisor: Prof. Yun Raymond Fu
Analyzed the EMG Signals

- Preprocessed the EMG signals using Fast Fourier Transform.
- Employed a LSTM to classifier the EMG signals.

Multi-view Learning

- Utilized TSN and WDMM to extract features from RGB graph and depth graph.
- Employed Generative models to fully explore multi-view information.
- Proposed a graph-based method to do the label-level fusion.

Semi-supervised Multi-View Learning

- Adapted domain adaptation methods to the multi-view learning.
- Employed Graph knowledge to help learning the representation.
- Utilized information entropy to help the fusion.

Shanghai Jiao Tong University, IIoT Research Center, Acemap,   **Jun 2017 - Jun 2018**
Supervisor: Prof. Xinbing Wang, Prof. Luoyi Fu
Analyzed the relationship of topics and authors
- Designed an algorithm to create a directed graph depicting different topics in the Academic Network.
- Used k-core algorithm, d-core algorithm to analyze the topics and authors.

Shanghai Jiao Tong University, Wireless Network Attack and Defense Laboratory,   **Sep 2016 – Jun 2018**
Supervisor: Prof. Ping Yi
Password cracking using deep learning
- Combined LSTM and Probabilistic Context Free Grammar(PCFG) models to create a more effective password guessing model, which had a better performance than both LSTM and PCFG under the same circumstance.
- Design GENPass which learns from multisource datasets to generate a general wordlist.

Shanghai Jiao Tong University, Undergraduate Innovation Project,   **Dec 2015 - Dec 2016**
Supervisor: Prof. Ping Yi
Designed an algorithm to detect and locate evil APs in the wireless network (using Linux, C)
- Researched and developed a detection algorithm in a small network based on MMSDU and a location algorithm based on the signal strength; a detection algorithm in a large network based on TTL.
- Designed and accomplished an Android client for the large network (Android Studio).

WORKING EXPERIENCE

Shanghai LiveSine Corporation,   **Jul 2016 - Sep 2016**
Supervisor: Prof. Chunyu Zhao
Position: Internship, R&D
Developed a Data Transfer Unit(DTU) with Bluetooth
- Designed and built a DTU with Bluetooth.
- Designed an APP which can communicate with the DTU by Bluetooth and with the server by TCP/IP (using Delphi).
